Claude Cheat Keys for UN Indicators & Dashboards

UN energy desks: 5 countries, one table.

Claude builds the table from the UN SDG Global Database. Skip the Nature check and you miss that some values are modeled.

Claude Cheat Keys for UN Indicators & Dashboards Tested

I asked for one table. It pulled the database.

The question asked for an Excel workbook. Claude returned the table and a script to build it.

It flagged its own gap. No file was saved.

Claude said what it could not do. The value it gave for Kenya matches the source.

CLAUDE · WITH THE MINIMAX-XLSX SKILL

“I couldn't create the Excel file. Running Python and `zip` both need your approval in this session, and neither was approved.”

asked 2026-10-30 18:26 UTC

Five countries, two years. Every one rose by 2024.

In 2024, only Rwanda is country data. The other four are modeled.

Copy this

Paste into a Project. Ask for the same table.

The question I asked

copy and paste

```
Using the UN SDG Global Database, build one
table in an Excel workbook showing the
proportion of the total population with access
to electricity (series EG_ACS_ELEC, national
total) for Kenya, Ethiopia, Bangladesh, Nepal
and Rwanda. For each country, give the 2015
value, the latest year with data, the value for
that latest year, and the change in percentage
points. Add Provider and Reference Link columns
for the source.
```
